

The Annual Street Maintenance Plan

The Annual Street Maintenance Plan for the City includes complete sidewalk and curb repairs, grout sealing, and panel replacements to go along with a full-depth reclamation of roads that need major repairs. In order to facilitate the work, the City has implemented multiple contracts for raw material purchase, including asphalt, gravel, flexbase, sand, and outscores grading for asphalt repairs. The City has also made several significant capital purchases over the last three years, including an asphalt repair truck, dump truck, brine sprayer, sanding spreader, and excavator. Below is a map of Celina, which shows the maintenance responsibilities for each street.
