

WATER SAVINGS AT HOME

The World's supply of clean, usable water is decreasing faster than it can be replaced. With just a few small changes, we can build a sustainable future together and protect our most precious resource.

Go Low and Slow the Flow

Using a low-flow shower head could potentially save 12,000 gallons per year and 12% on your energy bill.

No Cup Left Behind

Before you dump your old glass of water down the sink, look for a thirsty plant to make happy.

Accessorize Your Facet

Installing a low-flow aerator is one of the most cost-effective ways to save water. You can increase the facet's efficiency by 30% without sacrificing performance.

Get Flush with Savings

Fill a 1/2 gallon plastic container with water or gravel and place in the tank to save a 1/2 gallon every flush.

Catch a Running Toilet

A leaky toilet can waste 200 gallons every day! Add food coloring to the tank. If the color makes it into the bowl within 15 minutes, you have a leak.

Re-purpose Water

When you change the water in your fish tank, reuse it to water your plants. This also acts as a natural fertilizer.

Lighten Your Load

Installing a high-efficiency machine will use 50% less of water. Washing only full loads of laundry makes the most of the washing cycle.

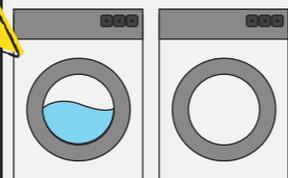

Think at the Sink

Use short blasts to rinse dishes instead of running water. This saves nearly 5,000 gallons a year!

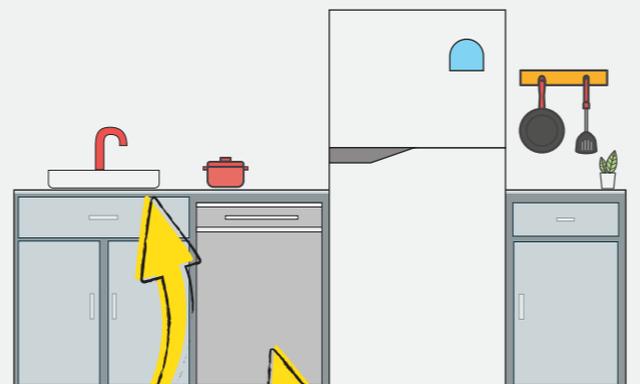

Fill 'er Up

Wash full loads of dishes to maximize your water savings. Using a dishwasher instead of hand washing dishes potentially saves 30-40 gallons.
